## PREFACE

## NEW FEATURE

This report provides the detailed results for each question from this school/district's 2015-16 California Healthy Kids Survey (CHKS), presented in tables organized by topic.

The CHKS, along with its two companion surveys-California School Climate Survey (CSCS) for staff and the California School Parent Survey (CSPS)-is a service of the California Department of Education (CDE). These three surveys form the California School Climate, Health, and Learning Surveys (CalSCHLS) System, the largest, most comprehensive effort in the nation to assess students, staff, and parents at the local level on a regular basis to provide key data on school climate, learning supports and barriers, and stakeholder engagement, as well as overall youth development, health, and well-being. The surveys provide a wealth of information to guide school improvement efforts and your Local Control and Accountability Plan (LCAP), particularly in regard to the state priorities of enhancing school climate, pupil engagement, and parent involvement.

Factsheets, guidebooks, and other resources to help in understanding and using survey results are available for downloading from the survey website: chks.wested.org. The California Safe and Supportive Schools website also provides a wealth of information and tools helpful in implementing effective strategies that address the needs identified by the survey in regard to school climate improvement and promoting social-emotional learning. Particularly valuable in regard to LCAP efforts are Making Sense of School Climate (californias3.wested.org/resources/S3_schoolclimateguidebook_final.pdf) and Helpful Resources for Local Control and Accountability Plans, 2014-15 (chks.wested.org/resources/LCAP _Cal_SCHLS.pdf).

The Cal-SCHLS Technical Assistance Center offers workshops to help in identifying local needs and developing action plans to meet those needs, including a Listening to Students Workshop for involving student voice in the process (see below).

## SURVEY PURPOSE

The California Department of Education (CDE) has funded the CHKS since 1997 to provide data that would assist schools in: (1) fostering positive school climates and engagement in learning; (2) preventing youth health-risk behaviors and other barriers to academic achievement; and (3) promoting positive youth development, resilience, and well-being. A thorough understanding of the scope and nature of youth behaviors, attitudes, and learning conditions is essential to guide school improvement efforts and to also develop effective prevention, health, and youth development programs. These surveys grew out of CDE's commitment to helping schools promote the successful cognitive, social, and emotional development of all students and create more positive, engaging school environments for students, staff, and parents.

## SURVEY CONTENT OVERVIEW

The secondary-school CHKS consists of a required general Core Module and a series of optional, supplementary topic-focused modules that districts can elect to administer. Districts may also add their own questions of local interest in a custom module. Table 1 indicates the modules administered by the district/school.

The Core Module consists of a broad range of key questions, identified by an expert advisory committee, that are considered most important for schools to administer to guide improvement of academic, health, and prevention programs and the promotion of student achievement, positive development, and wellbeing. The primary focus of the Core Module is assessing student perceptions and experiences related to school climate and engagement, learning supports, and health-related, non-academic learning barriers (e.g., substance use, bullying and violence, and poor physical and mental health). To further support school improvement efforts and the LCAP process, a supplementary School Climate Module is also available.

## School-Related Core Content

The great majority of all questions on the CHKS Core are school-specific. The survey provides selfreported data on:

- Student grades, truancy, reasons for missing school, learning motivation, and school connectedness, as indicators of engagement;
- The levels of students' three fundamental developmental supports (protective factors) that promote positive academic, social, and emotional outcomes: experiences of caring adult relationships, high expectations, and opportunities for meaningful participation at school;
- Perceived safety and the frequency of, type, and reasons for, harassment and bullying at school; and
- Levels of violence, substance use, and crime-related behavior (e.g., weapons possession) at school.

## Supplementary School Climate Module

A supplementary School Climate Module provides additional data on student academic mindset, school academic supports, discipline/order, supports for social-emotional learning, bullying prevention and positive peer relationships, respect for diversity, and the quality of the physical environment (download from chks.wested.org/administer/supplemental1\#clim). A companion Learning Conditions module can be added to the staff survey to compare their perceptions on the same constructs.

## SURVEY ADMINISTRATION AND SAMPLING

School staff administered the survey, following detailed instructions provided by CDE that were designed to assure the protection of all student and parental rights to privacy and to maintain confidentiality. Students were surveyed only with the consent of parents or guardians. Each student's participation was voluntary, anonymous, and confidential. Table A1.1 gives the target sample of students and the final number and percent of students who completed the survey (the participation response rate).

## THE REPORT

The tables in the Main Report, organized by topic, provide the percentages responding to each question response option by grade level. Because it is just as important to identify the positive behaviors of youth as it is to identify the risks they face, the tables reporting risk-behavior data include the percentages of youth who responded negatively (did not engage in the behavior).

## Racial/Ethnic Subgroup Results

Several tables are useful for helping districts identify and address student needs related to closing the state's persistent racial/ethnic achievement gap. On the CHKS, students are asked to indicate their racial/ethnic identity and to report whether they have experienced harassment because of their race/ethnicity. Summary tables provide key findings (e.g., harassment, developmental supports, school connectedness) disaggregated by race/ethnic categories. Schools can request supplementary reports disaggregating all their CHKS results by the race/ethnicity of students.

## UNDERSTANDING AND USING THE DATA

Among the tools available to help in understanding and using the survey results, especially for LCAP implementation and monitoring, Making Sense of School Climate provides a discussion of all the CalSCHLS survey items that relate to school climate (download californias3.wested.org/resourcesS3_school /climateguidebook_final.pdf)

Care must be taken to understand the factors that can impact the quality, validity, and generalizability of the results, such as changes that occur in survey content, administration, and/or sample characteristics between administrations. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the CHKS Guidebook to Data Use and Dissemination (download chks.wested.org/resources/chks_guidebook_3_datause.pdf).

## Sample Characteristics

Among the most important factors affecting the quality of survey results is the level and type of student participation. The validity and representativeness of the results will be adversely affected if the student response rate is lower than $60 \%$. One indication of the survey's representativeness is how accurately the sample reflects the gender and ethnic composition of the student enrollment. Even if the response rate is low, the results provide an indication of what those students who did respond felt about the school and their experiences and behavior.

## Changes Between Survey Administrations

Many factors besides real changes in behavior, attitudes, or experiences among students may account for changes in results from administration to administration. Changes may be due to differences over time in the characteristics or size of the sample of students who completed the survey, changes in the questions themselves, or differences between time periods in which the survey was administered (e.g., some risk behaviors tend to increase as students age, or may increase during holidays or social events).

## NEXT STEPS

Receiving this report is just a beginning step in a data-driven decision-making process. The results of this student survey should be compared to those obtained from the Cal-SCHLS surveys of school staff and parents. It is important to determine how consistent are student, staff, and parent perceptions and experiences.

CHKS results will also be enriched if analyzed in the context of other data typically collected by schools that relate to the variables assessed, such as discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

The following actions, which can be requested as custom services (additional fees apply), will help in fostering effective use of the results to support school and program improvement efforts and the LCAP process.

## Request School Reports

If the schools in the district vary significantly in demographics, programs, or other characteristics, consider requesting individual reports for each school (a fee applies). Two types of reports are available:

- A full report with all the survey results.
- A short, user-friendly, graphic School Climate Report Card that provides results across eight domains of school climate and provides an overall School Climate Index score based on those domains. (View a sample report: visit californias3.wested.org/resources/California_State_SCRC -1314.pdf).

## Request District School Climate Report Card

For districts that survey all their schools, a district-level School Climate Report Card that aggregates all their results across eight domains can also be requested. This is a powerful, useful tool for guiding efforts to meet the school climate and pupil engagement priorities for the Local Control and Accountability Plan.

## Request Disaggregated Report or Analyses

The staff of the Regional TA Centers can produce full reports that look at how results vary by demographic subgroups (e.g., race/ethnicity as discussed above, or by youth who are low in academic motivation compared those who are high). This is particularly important given the LCAP requirement the districts identify and address the needs of underserved subgroups.

## Engage Students, Staff, and Parents in an Action Planning Process

Engage students, staff, and parents in reviewing and exploring the meaning of the results and obtain their input into how the school might better meet the needs identified and the development of a detailed action plan. This communicates to stakeholders that you value their input into how to improve the school and gives them an opportunity for meaningful participation. This helps enhance school connectedness among students and parent involvement, two of the LCAP priorities. It will also promote higher rates of participation the next time the survey is administered, as stakeholders will see how the data has been used for positive purposes.

On request, Cal-SCHLS staff can conduct a structured group Listening to Students Workshop designed
to explore with students, as staff observe, the meaning of survey results and obtain their input on how to address the needs identified by the survey. Cal-SCHLS staff also can conduct a Data Use Action Planning Workshop designed to identify local needs based on the survey results and engage stakeholders in developing a detailed plan and timetable for meeting those needs using evidence-based strategies.
